

To whom it may concern

January 17,2018

I am pleased to recommend Mehri Mohammadi to continue her study in the Computer Science/Engineering field in your university. I have known her for about four years as a student of the college that I used to work with.

She has passed two courses, Digital Design and Computer System Architecture, with me. Also, she has passed her final Bachelor's project under my supervision and the scope of project was in the area of "Micromous Robots". Due to her eagerness to being involved in robotic projects, she participated in the 'Robotic competition" held in the college as well.

Mehri is very punctual, responsible and hard-working student who is able to work well in groups as well as on her own. She has an excellent grasping power and a significant eagerness for learning the subject that she shows interest in and I was always impressed by her perseverance and performance in her projects.

I strongly recommend her for your Master program and believe that she will make considerable contribution to your graduate program during her studies. She deserves to be awarded any kind of financial assistance that is available.

Yours sincerely,

Rozita Abnavi
